Professional Summary

Frontend Engineer with 2+ years of experience building production-grade fintech, healthcare, and SaaS applications using React.js and Next.js. Experienced in developing data-heavy dashboards, clinical and financial workflows, and secure systems handling sensitive data. Strong in TypeScript, state management, and modern frontend architecture, with hands-on experience using AI-assisted development tools (Claude Code, Cursor, GitHub Copilot) to improve development speed and code quality.

Technical Skills

Frontend	React.js, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, Bootstrap
State Management	Zustand, React Query (TanStack Query), Redux Toolkit
Performance	SSR/SSG (Next.js rendering strategies), memoization, virtualization
Familiar With	Node.js, Express.js, MongoDB
Tools	Git, GitHub, CI/CD, GitHub Actions, DigitalOcean
AI-Assisted Dev	Claude Code

Professional Experience

Metromind India
Frontend Developer, IT Department Feb 2026 – Present

- Frontend developer on a cross-functional team — clinicians (psychiatrists, psychologists, therapists), system architects, AI engineers, and IT staff — building a comprehensive **mental health hospital management system** from the ground up, since generic hospital management software doesn't fit the specific needs of psychiatric care.
- Working to digitize every step of a patient's treatment journey — **nursing stations, vitals, qEEG analysis, psychometric assessments, and case sheets** — reducing clinician paperwork time and keeping records centralized.
- Built the frontend for an **AI-assisted case sheet workflow** that transcribes and summarizes psychologist–patient sessions to auto-fill case sheets — and collaborated closely with the backend team on AI-assisted summarization used across several other areas of the platform as well, not just session transcription.
- Helped integrate all clinical assessments and reports — **qEEG, psychometric evaluations, genetic reports**, and more — into a single unified system.
- Built the frontend across the hospital's full range of departments, replacing fragmented, paper-based processes with real-time, connected workflows that keep every user in sync while working together — along with the hospital's public **marketing/landing page**.
- Built internal **utility tools** that digitized department workflows previously done on paper, working directly with clinicians and hospital staff to translate clinical workflows into usable interfaces.
- Given access to a **premium Claude Code subscription** by the company; used it to learn agentic coding workflows in depth and applied it daily to speed up feature development, debugging, and refactoring across the project.

Finnest Technologies Kochi
Software Developer May 2024 – Feb 2026

- Key frontend contributor to **Dinero**, a large-scale enterprise fintech platform used by money exchange businesses for **remittance processing, AML compliance, treasury operations, and accounting workflows**.
- Built and maintained **data-heavy dashboards, operational workflows, and transaction systems** used in real-world financial environments.
- Designed complex **multi-step financial transaction flows** with draft persistence, ensuring reliability in critical user operations.
- Developed **AML compliance dashboards** enabling compliance teams to monitor, investigate, and assess financial risks.
- Implemented secure **Maker–Checker workflows** and **role-based access control (RBAC)** for sensitive financial actions.
- Collaborated closely with backend teams to define **data contracts, API integrations, and edge case handling**.
- Improved application performance and delivery speed through better component reuse and shared form modules.

- Actively used **AI-assisted development tools** for complex problem-solving while critically reviewing outputs for correctness and security.
- Participated in **client product demonstrations in Qatar**, representing frontend engineering.

Brototype Kochi
MERN Stack Developer Intern Jan 2023 – Feb 2024

- Developed a full-stack **e-commerce platform** end to end, from product catalog to checkout.
- Implemented **cart, checkout, and payment workflows** including online payment gateway integration.
- Built secure **authentication and OTP verification systems**.
- Designed and optimized backend APIs and database queries for the platform.
- Gained strong fundamentals in **frontend architecture, backend integration, and debugging**.

Projects

MetroMind – Hospital Management Platform *Metromind* · Feb 2026 – Present

- A multi-role platform covering the hospital's full range of clinical and operational workflows, built with **server-side rendering and static generation (Next.js App Router)** for fast, reliable page loads.
- Built **role-based user interfaces** for each staff type — nursing, reception, communication, therapists, psychologists, and psychiatrists — each tailored to that role's specific workflow and permissions.
- Built the frontend for **AI-assisted features** across the platform, including **AI audio transcription** of psychologist–patient sessions, **AI-powered case sheet auto-fill**, and **AI report summarization** — collaborating closely with the backend team on each integration.
- Integrated **real-time updates via Server-Sent Events** so all users stay in sync while working concurrently, including ticket-based auth against a separate ASGI backend process.

Tech Stack: Next.js 16, React 19, TypeScript, Tailwind CSS v4, React Query, Zustand, Server-Sent Events, DigitalOcean

Dinero – Enterprise Financial Operations Platform *Finnest Technologies* · May 2024 – Feb 2026

- Core contributor to a **large-scale fintech system** used by money exchange businesses to manage financial operations.
- Platform includes **90+ modules** covering treasury, accounting, AML compliance, reporting, and transaction processing.
- Built critical features for **teller operations, onboarding, workflow automation, and compliance systems**.
- Designed frontend systems that handle **high-volume financial data, pagination, and real-time workflows**, optimized through **code splitting, lazy loading, memoization, virtualization, and efficient state management**.
- Focused on **accuracy, security, and performance** in handling sensitive financial data.

Tech Stack: React 18, Next.js, TypeScript, Zustand, React Query, REST APIs

SynConnect – NFC Digital Business Card Platform *Freelance* · Feb 2024 – Present

- Built an **NFC-based digital business card platform** with profile sharing and dashboard management.
- Developed **customizable profile systems, analytics tracking, and lead capture features**.
- Designed scalable frontend architecture with strong API integration patterns.

Tech Stack: Next.js, Redux Toolkit, Node.js, Express, MongoDB, DigitalOcean, React Query

Carewell – Clinical Management SaaS Platform

- Built a **clinical SaaS platform** with structured workflows for medical data processing, integrating **LLM-powered pipelines (Google Gemini)** for transforming unstructured data into insights.
- Optimized AI usage with **caching strategies and cost-efficient API design**, and implemented **RBAC systems** to manage sensitive healthcare data securely.

Tech Stack: Next.js 15, Node.js, Express.js, MongoDB, Gemini AI, Tailwind CSS

Education

Zamorins Guruvayoorappan College, Calicut University 2019 – 2022
B.Sc. Chemistry — Calicut, India — 65%
