Professional Summary

Frontend Engineer with 3 years of experience designing and building large-scale web applications in healthcare and fintech using React, Next.js, and TypeScript. Skilled in frontend system design and codebase architecture, taking features from requirements gathering to release on complex, domain-heavy products. Experienced in turning clinical and financial workflows into scalable, maintainable frontend systems, and in integrating AI features into production workflows.

Technical Skills

Languages	TypeScript, JavaScript (ES6+), HTML5, CSS3
Frontend	React, Next.js, TanStack Query, Zustand, Redux Toolkit, Tailwind CSS
Engineering	Frontend architecture, RBAC, real-time UIs, REST API integration, performance optimization
Backend & Tools	Node.js, Express.js, MongoDB, Git, GitHub Actions, CI/CD, DigitalOcean, Vercel, Claude Code

Professional Experience

Utharam Health Tech *(technology partner for MetroMind Hospital)* Kochi
Frontend Engineer May 2026 – Present

- Sole frontend engineer for MetroMind's **Hospital Management System** and **Clinical Decision Support** platform; set up both codebases from scratch with a **modular, role-based architecture**.
- Delivered the frontend for the hospital's core departments (**front desk, communication, psychology, psychiatry, inpatient and outpatient care, nursing stations, and pharmacy**), moving daily hospital operations off paper.
- Built the **psychiatrist's consultation workspace** for diagnosis, prescriptions, and treatment planning, bringing assessments and reports into one view for faster treatment decisions.
- Shipped **AI-assisted case taking**: **Sarvam AI** transcribes psychologist–patient sessions and the transcript auto-fills assessment forms, cutting manual data entry.
- Designed a custom **real-time event layer using Server-Sent Events**, with ticket-based auth against a separate ASGI backend, keeping departments in sync as patients move between them.
- Worked directly with the founding psychiatrist, system architects, and hospital staff to turn clinical workflows into product requirements, iterating on user feedback.
- Designed and built the hospital's public website, **metromindhospitals.com**.

Finnest Technologies Kochi
Software Developer (Frontend) May 2024 – Feb 2026

- Key frontend contributor to **Dinero**, a large-scale enterprise fintech platform used by money exchange businesses for **remittance processing, AML compliance, treasury operations, and accounting**.
- **Represented the frontend team on a client visit to Qatar**, presenting product demonstrations to the client.
- Engineered **data-heavy dashboards, operational workflows, and transaction systems** for live financial operations.
- Designed **multi-step financial transaction flows** with draft persistence, keeping critical operations reliable and recoverable.
- Developed **AML compliance dashboards** enabling compliance teams to monitor, investigate, and assess financial risks.
- Implemented secure **Maker–Checker workflows** and **role-based access control (RBAC)** for sensitive financial actions.
- Defined **data contracts, API integration patterns, and edge-case handling** together with backend teams.
- Improved performance and delivery speed by introducing **reusable components and shared form modules** across the platform.

Brototype Kochi
MERN Stack Developer Intern Jan 2023 – Feb 2024

- Developed a full-stack **e-commerce platform** end to end, from product catalog to checkout.
- Implemented **cart, checkout, and payment workflows** including online payment gateway integration.
- Built secure **authentication and OTP verification systems**, and designed backend APIs and database queries for the platform.

Projects

MetroMind – Hospital Management & Clinical Decision Support Platform *Utharam Health Tech*

- **Multi-department hospital platform** covering the full patient journey, from **front desk** through assessment, consultation, and treatment.
- **Role-based workspaces** for front desk, communication, psychologists, psychiatrists, and nursing stations, each with its own permissions and workflow.
- **Inpatient and outpatient workflows**, with **nursing stations** supporting day-to-day inpatient care.
- **Psychiatrist consultation module** with **doctor notes, diagnosis, and prescriptions**, linked to the pharmacy.
- **Real-time notifications via Server-Sent Events (SSE)**: when a patient moves to the next department, the receiving team is notified instantly.
- **Pharmacy store-to-counter flow** with separate store manager and pharmacist roles, stock movement, and **staff duty rostering**.
- **Clinical Decision Support (CDS)**, the platform's core clinical layer, bringing together each patient's psychologist assessments, standardized psychometric scales, an in-house multi-layer clinical assessment, brain-mapping (qEEG), **genetic reports**, and other medical reports.
- Presents this data as a **unified patient profile**, giving psychiatrists and psychologists a **single source of truth** to converge on a **data-driven treatment plan**, with the clinician making the final call.

Tech Stack: Next.js 16, React 19, TypeScript, Tailwind CSS v4, TanStack Query, Zustand, Server-Sent Events, Sarvam AI, DigitalOcean

Dinero – Enterprise Financial Operations Platform *Finnest Technologies*

- Core contributor to a **large-scale fintech system** used by money exchange businesses to manage financial operations.
- Platform includes **90+ modules** covering treasury, accounting, AML compliance, reporting, and transaction processing.
- Built critical features for **teller operations, onboarding, and compliance systems**.
- Designed frontend systems that handle **high-volume financial data, pagination, and real-time workflows**, optimized through **code splitting, lazy loading, memoization, virtualization, and efficient state management**.
- Focused on **accuracy, security, and performance** in handling sensitive financial data.

Tech Stack: React 18, TypeScript, Zustand, TanStack Query, REST APIs

SynConnect – NFC Digital Business Card Platform | synconnect.in *Founder* · Feb 2024 – Present

- Founded and built a production **NFC digital business card platform** with **250+ active users**.
- Developed **customizable profiles, profile sharing, analytics tracking, lead capture**, and a management dashboard.
- Own the product end to end, from the **Next.js frontend and Node.js/Express APIs** to **deployment on DigitalOcean**.

Tech Stack: Next.js, Redux Toolkit, TanStack Query, Node.js, Express, MongoDB, DigitalOcean

Carewell – Clinic Management Platform *Client Project*

- Worked directly with a BHMS doctor in Calicut to replace her **pen-and-paper consultations**, starting with a **study of her consultation workflow** and case-taking process.
- Designed **structured case-taking forms**, a **homeopathic assessment flow**, and a **prescription tool** around how she actually works, turning her paper process into a fast digital routine.
- Built the **Node.js/Express backend** and **MongoDB data model** for patients, consultations, and prescriptions.
- **AI-assisted medical notes**: the server calls the LLM (Gemini) and returns draft notes that the doctor can review and edit before saving.

Tech Stack: Next.js 15, Node.js, Express.js, MongoDB, Gemini API, Tailwind CSS

Education

Brototype – Full-Stack Web Development (MERN) 2023 – 2024
Self-paced, project-based bootcamp with weekly technical reviews — Kochi, India

Zamorin's Guruvayurappan College, Calicut University 2019 – 2022
B.Sc. Chemistry — Calicut, India
